

Patrick Thompson

Cloud Engineer | Infrastructure as Code & Automation

pattson22@gmail.com github.com/pattson22 LinkedIn pattson22.github.io
Germany

Profile

Cloud Engineer and BSc Computer Science student specialising in Infrastructure as Code, automation, and resilient cloud-native architectures on AWS. AWS Certified Solutions Architect (Associate) with hands-on experience using Terraform, Docker, and CI/CD pipelines to provision and operate production-grade infrastructure. Background in operations and team leadership brings strong discipline around risk management, reliability, and clear documentation. Seeking a working student (Werkstudent) cloud engineering role in Germany.

Technical Skills

Cloud / AWS	EC2, VPC, IAM, S3, Lambda, ALB, Auto Scaling, RDS, CloudWatch, Route 53
IaC	Terraform, infrastructure provisioning, state management
Containers /	Docker, GitHub Actions, automated build/test/deploy pipelines
CI/CD	
Scripting	Python (boto3), Bash, automation & tooling
Systems	Linux administration, networking, security groups, OS fundamentals (C)
Practices	Security by default, high availability, monitoring, documentation

Certifications

AWS Certified Solutions Architect – Associate	Active
<i>Amazon Web Services</i>	
HashiCorp Terraform Associate	In Progress
<i>HashiCorp</i>	

Selected Projects

Multi-tier Cloud Application (CloudHub)	Terraform, AWS, Docker, CI/CD
<i>Personal / Lab</i>	
- Provisioned a three-tier (web / app / database) AWS environment entirely with Terraform. - Containerised services with Docker; automated build, test and deploy with GitHub Actions. - Designed public/private subnets and least-privilege security groups.	
Highly Available Crypto API	Terraform, AWS, ALB, Auto Scaling
<i>Personal / Lab</i>	
- Deployed a resilient REST API across multiple Availability Zones behind an Application Load Balancer. - Used Auto Scaling for elasticity and IAM roles / secrets management to avoid hardcoded credentials.	
MLOps API Infrastructure	AWS, Docker, Python
<i>Personal / Lab</i>	
Packaged and served a machine-learning model behind a REST endpoint with a reproducible, container-based workflow.	
Simple Shell & Low-Level Programming	C, Linux
<i>ALX</i>	

- Built a Unix command-line interpreter in C: parsing, PATH resolution, fork/exec, built-ins.
- Strengthened understanding of processes, system calls and Linux internals.

Education

BSc Computer Science

GISMA University of Applied Sciences

Expected

Germany
